

# Tame the complexity of your open source across your organization

ActiveState provides a unified platform to discover, manage, and secure your open source software across multiple ecosystems and deployment environments, fostering collaboration between development, security, and operations teams.

## 1. Comprehensive Discoverability

### Import from Anywhere

Create a complete catalog of open source components from various sources like SBOM files, Helm charts, Docker registries, Kubernetes clusters, and language-specific manifest files.

## 2. Proactive Observability

### Analyze Everything

Identify outdated, vulnerable, or end-of-life components based on your organization's guidelines using policy management and continuous monitoring.

#### Sources Analyzed

6 Docker Images

#### 2,347 Total Dependencies

47%	<span style="color: blue;">●</span> C	1,099 Dependencies
37%	<span style="color: orange;">●</span> Java	866 Dependencies
13%	<span style="color: teal;">●</span> Go	324 Dependencies
2%	<span style="color: grey;">●</span> Other	55 Dependencies
1%	<span style="color: blue;">●</span> Python	3 Dependencies

#### 1,596 Total Vulnerabilities

 32 distinct licenses  
 5 GPL licenses

#### Need a record of everything you're running right now?

Our downloadable reports help give you clarity & insight into what you're running.

### 3. Streamlined Remediation

## Upgrade, Rebuild & Redeploy

Update and upgrade open source components at scale, integrating seamlessly with your existing CI/CD pipelines.

### Remediation Plan

We've identified 4 projects that can be updated to reduce your risk profile. [Upgrade 4 Projects](#)

---

#### Secure Dependencies

Not containing high-risk CVEs ↑ 598

**Before** 1,115 **47%** **After** 1,713 **73%**

#### High-Risk Vulnerabilities

Total count of Critical & High CVEs ↓ 62

**Before** 150 **After** 88

**Critical** 14 **Critical** 4

**High** 136 **High** 84

---

#### 4 Projects

The following projects have remediation updates available.

- spark 3.4.1
- postgres 14
- python 3.10.0
- prometheus 2.48.9

#### Project: spark 3.4.1

[Upgrade Project](#) [Configure Project](#)

Dependency Comparison Vulnerabilities Removed 35 Vulnerabilities Added 5

BEFORE	AFTER
Base Image	Base Image
spark 3.4.1	spark 3.5
50 Total Vulnerabilities	20 Total Vulnerabilities

### Build Status

✓ Finished Build time - 2m 44s 192 Packages Built

After remediation, the Platform rebuilds your dependencies from source, ready to redeploy with our CLI tooling.

### A Truly Collaborative Platform

Facilitate seamless collaboration between development, security, and operations teams, ensuring a shared understanding of open source components and their associated risks.

## Ready to tame the complexity of your open source?

Let our team of experts show you how to use the ActiveState Platform can help your organization manage the risks associated with Open Source.
